Florida Red Ruffles and Florida Irish Lace: Two New Lance-leaf Caladium Cultivars
Gary J. Wilfert, Univ. of Florida, IFAS, Gulf Coast Research & Education Center, 5007 60th St. E., Bradenton, FL 34203
Two lance-leaf caladium cultivars are to be released from the ornamental breeding program at the University of Florida. "Red Ruffles", whose pedigree is Red Frill x "Red Frill" x "Candidum Jr.", has elongated medium red leaves with ruffled green margins. Plants are upright with strong petioles, have leaf blades 25 cm long and 14 cm wide, and attain a height of 61 cm when grown in full sun in the field. Plants have more leaves and are more cold tolerant than "Red Frill", the major red lance-leaf cultivar of commerce. Tuber yields of "Red Ruffles" are similar to "Red Frill" but less than "Rosette", with production indices of 95.0, 91.8, and 121.0, respectively. Foliage of "Red Ruffles" is more upright and less likely to elongate under reduced light than the other cultivars. "Irish Lace", an F₂ selection from a cross of "Candidum Jr." x "Red Frill", has elongated dark green leaves with heavily ruffled margins, which are etched with a thin red border. Leaf blades are 26 cm long and 8 cm wide and have heavy substance. Plant height is 65 cm in the field. Tuber yields of "Irish Lace" are greater than "White Wing", a major green/white cultivar. Use of a green caladium would be as a border or a mixture with red or white lance-leaf cultivars.
